

High Fire Risk in Warehouses Can Cost Your Clients Millions!

Give your clients documented fire risk reduction and the opportunity for lower premiums!

Fire Load from Wooden and Plastic Pallets Is a Primary Driver of Warehouse Fire Risk

The use of wooden pallets and plastic pallets as load carriers in warehouses increases fire intensity, sprinkler dependency, and Probable Maximum Loss (PML), influencing risk classification under applicable fire safety standards and regulations.

Eliminate Combustible Risk with IPG Evopallet® – The Smart, 100% Fireproof Solution for Safer Warehouses

By transitioning to IPG Evopallet®, a 100% fireproof metal sheet pallet, insurers can offer clients a verifiable, permanent solution that eliminates combustible load at its source.

IPG Evopallet® significantly reduces fire propagation risk, lowers potential loss severity, and supports a safer, more manageable underwriting profile. Clients implementing IPG Evopallet® can potentially benefit from lower insurance premiums and reduced warehouse costs, as fire propagation risk is minimized and sprinkler requirements are significantly reduced.

**Safe, Sustainable,
Fireproof – IPG
Evopallet®**

Decades of Logistics Expertise at Your Service

With extensive experience spanning decades in the logistics industry, we are uniquely positioned to support insurers in understanding and presenting the benefits of IPG Evopallet®. We are ready to provide in-depth information and tailored presentations that demonstrate how IPG Evopallet® can dramatically reduce fire risk across warehouses and logistics centers, while offering verifiable, risk-reducing solutions to clients.
